

BNI

INDONESIA NATIONAL CONFERENCE 2 0 2 6

App Guide

Four apps, one system — from morning registration to the closing lucky draw. This guide follows the day, app by app.

A · Attendees — bninatcon.com

B · Booths & Sponsors — bninatcon.com/tenant/login

C · Door Crew — [/door/login](#)

D · Committee — admin panel

3 SEPTEMBER 2026 · PULLMAN CENTRAL PARK JAKARTA

Contents

D	Committee — classes, tables and QRs	11
D	Committee — on the day & wrap-up — rounds, lucky draw, reports	12
•	Frequently asked questions	13

How to use this guide: every section stands alone and starts on a fresh page — print pages 4–6 for attendees, 7–8 for booth crews, 9 for the door crew. Page 3 (the day at a glance) is worth handing to everyone.

The day at a glance — who uses what, when

Every app reads the same database, so whatever one side scans, the other side sees the same second.

TIME	WHAT HAPPENS	APPS
07:00 – 09:00	Registration. Attendees show My QR ; the door crew scans it in Goodiebag mode, then Pin — one of each per attendee.	A + C
09:00 – 12:00	Opening & plenary. The committee watches the registration numbers on the dashboard.	D
12:00 – 13:00	Expo. Booths scan attendee QRs → the stamp lands in the attendee's passport that second; lead notes are typed from the booth dashboard.	A + B
13:00 – 15:00	Two learning-class sessions. Attendees show their class QR (not My QR); the door crew, in Class attendance mode, picks the class and scans.	A + C
16:00 – 17:00	Speed networking. Attendees scan the QR on their table; the committee presses Start round — the same clock runs on every phone.	A + D
17:00 – 18:00	Lucky Draw & Doorprize from the admin panel, in stage mode. Winners drop out of the other draw automatically.	D

One rule every scanner shares: the attendee QR carries their **ticket number**. If the camera fails, type it in — a ticket number, member code (NATCON-2026-...), email, or phone number are all recognised. A double scan never doubles anything: the system answers "already done", with the time.

Signal drops? Booth scans queue on the phone and send themselves when the signal returns. Stamps, classes and goodiebag pickups live on the server — not on the phone — so switching devices loses nothing.

A

Attendees — before you leave home

bninatcon.com · phone browser, nothing to install

1

Open **bninatcon.com** and sign in

Email = the address the ticket was bought with. First password = **natcon2026** — the same one for everybody.

2

Agree to the data notice, then choose your own password

The first sign-in shows one screen: a notice that using the app means giving the committee your **name and email** — tick the box to agree — and the fields to replace the generated password (8 characters or more). Save stays disabled until the box is ticked. That password is the one you use all day.

3

Get to know the app

Press **Quick tour** next to *Log out*: six steps that walk the screens as they explain them, read out loud if your volume is up.

Sign-in — the first-password rule is written under the form

First sign-in: choose a password of your own

Forgot password: chapter + the phone number on your ticket

Forgot your password? Both fields must match the ticket — one alone is not enough; if they do not match, the registration desk fixes the record. **One email, two tickets?** After the password, the app asks which one you are (#1/#2) — each ticket is its own account with its own QR.

A Attendees — at the venue

morning registration, then the expo floor

1 Show My QR at the registration desk

The crew scans it twice: once for your goodiebag, once for your pin. The same QR works at every booth.

2 Collect stamps across the expo

Every booth that scans your QR lights up on the **Passport** tab, with a progress count. Booth visits are what qualify you for the lucky draw — the committee sets the minimum.

3 Watch your day from Home

Your pass card, booths visited, pins, goodiebag and the day's agenda — all on one screen.

Home — pass, day stats, quick menu and the agenda

My QR — for booths, the goodiebag and the pin

Passport — a stamp lights up per booth; sponsors on top

A

Attendees — classes & networking

midday to late afternoon

1 Pick your classes on the Learning Session tab

Two classes are allowed as long as their hours differ; a third class, or a clashing hour, is refused by the app. Seats are limited — if one is full, pick another.

2 At the class door, show your class QR — not My QR

Open your class → *Show class entry QR*. The door crew scans it to record attendance. Changed your mind? *Cancel this registration* frees the seat instantly.

3 Speed networking: scan the QR on the table

You are seated at that table at once. Everyone at it appears with their chapter and line of business — save contacts and write notes from the same screen. The round clock above runs in sync on every phone.

Learning Session — class cards with speakers & seats left

Class QR — the door pass, separate from My QR

Network — scan the table QR; history & contacts kept

The lucky draw: there is nothing to enter — just attend and collect booth visits. Winners are announced from the stage; nobody wins twice.

B

Booths & Sponsors — end to end

bninatcon.com/tenant/login · account `booth-<code>@natcon.id`

1 Morning: sign in with your booth account

All lowercase, both the address and the password. Booth A14 → `booth-a14@natcon.id` ; the first password is `natcon2026` , the same one for every booth. (If a phone keyboard capitalises the first letter anyway, the app still accepts it while the booth is on that password.) It opens the door once: on first sign-in the app asks the crew to set their own. One account per stand; a company on two stands uses its first stand's code.

2 All through the expo: scan every visitor's QR

Point the camera at an attendee QR → their name, chapter and coupon count appear at once, and the stamp lands in their passport. Re-scanning the same person is safe: it counts once.

3 Camera trouble? Type it in

Ticket number, member code, or phone number — the manual field under the viewfinder takes all three.

4 For every lead: open the Dashboard

The newest visitors are on top. Tap a name for the details — chapter, contacts — and write a note; your notes ride along in the leads sheet the committee exports for you.

The booth's own door — the account pattern is written below

Scanner — viewfinder + the manual field

Dashboard — latest visitors, tap for detail

B Booths & Sponsors — leads & troubleshooting

Visitor detail — profile, contacts, and the note field

SITUATION	WHAT TO DO
An attendee QR will not read	Ask them to turn up the screen brightness, or type their ticket number into the manual field.
"Already scanned"	Not an error — you have simply scanned that person before. Their stamp stays at one.
Signal drops	Keep scanning. The offline queue re-sends automatically when the signal returns — just do not close the tab.
Forgot the booth password	Only the committee can reset it — go to the registration desk.
Want your leads data	The committee exports it from the admin panel (Reports → Tenant Leads) — your notes included.

Floor etiquette, briefly: scan first, chat after — a booth queue moves fast when the scan takes two seconds. Lead notes are most useful written the moment the person walks away.

C Door Crew — end to end

/door/login · account `door@natcon.id` · one screen, three modes

1 Morning (registration): Goodiebag mode, then Pin

Pick the mode *before* the queue starts — the scanner does exactly what is selected. Scan the attendee's My QR; one each per person, and a second scan is refused with the name and the time of the first handover.

2 Midday (classes): Class attendance mode + pick the class

Choose the class whose door you are working. Attendees show their **class QR**; registered → attendance recorded, not registered → refused with the reason. The attended/registered counters run on screen.

3 Any time: manual input

Ticket number, member code, email or phone — for the phone whose screen refuses to scan.

The screen displays the BNI Indonesia National Conference 2026 logo and event details: 3 SEPTEMBER 2026 · PULLMAN CENTRAL PARK JAKARTA. Below this, it says "DOOR CREW" and "Sign in to scan attendees into a learning class, and to hand over goodiebags and pins." There is a login form with a username field containing "door@natcon.id" and a password field with a "Show" toggle. A large red "SIGN IN" button is at the bottom.

Sign-in — only door/admin accounts are accepted

The screen is titled "Door Check-in" and explains: "One scanner for the door: class attendance, goodiebags and pins — each handed over once per attendee." It has two main sections: "01 What are you scanning for?" with options for "Class attendance" (into a learning class), "Goodiebag" (one per attendee), and "Pin" (one per attendee); and "02 Choose Learning Class" with the note "Each door crew covers one room". A "Log out" button is in the top right.

Attendance mode — pick the class, then scan

The screen shows "Class attendance" (into a learning class) and "Goodiebag" (one per attendee) as selected modes. It features three large counters: "0 Handed over", "769 Attendees", and "769 Still to collect". Below is a section "02 Scan Attendees" with the instruction "Handing over goodiebags · camera or manual input — a ticket number, member code, email or phone all work" and a "Turn on Camera Scanner" button. A "Log out" button is in the top right.

Goodiebag mode — the handover counters running

Settling a queue dispute: when somebody insists they have not collected, the system's answer carries the *time* of the first handover — that settles it. A genuine mistake can only be corrected by the committee.

D

Committee — before the day

admin panel · account `admin@natcon.id`

1

Make sure the master data is right

866 attendees, 36 exhibitors and 4 sessions arrive seeded. The **Attendees** page is for searching, correcting and resetting passwords; **Import Excel** takes the ticketing export as-is — existing rows are updated, never duplicated.

2

Tidy the Rundown

One-hour blocks; the attendee agenda reads it live, no redeploy. Classes are placed into their hour from the Learning Session page — the “two classes, no clash” rule follows this placement.

3

Print the QRs from QR Prints

Networking-table QRs, booth QRs (WIT.id prints first), class QRs and the sign-in door posters — pick a size, tick what to print.

Master Data — Attendees

Member code & default password are generated automatically

Rundown

The day in one-hour blocks — this is what attendees see as the agenda, and where learning classes get their time

10 blocks
Add Block

THURSDAY 3 SEPTEMBER			
TIME	LENGTH	KIND	WHAT HAPPENS
07:00 – 09:00	2 hours	REGISTRATION	Registration & Door Check-in Main Lobby · collect your goodiebag and pin
09:00 – 10:00	1 hour	PLENARY	Opening Ceremony Grand Ballroom
10:00 – 12:00	2 hours	PLENARY	Plenary Session Grand Ballroom
12:00 – 13:00	1 hour	BREAK	Lunch & Booth Expo Exhibition Foyer · collect your booth stamps
13:00 – 14:00	1 hour	LEARNING CLASS	Learning Class — Session 1 Learning Classes 1–4
14:00 – 15:00	1 hour	LEARNING CLASS	Learning Class — Session 2 Learning Classes 1–4

Rundown — the day in one-hour blocks, grouped by date

Networking tables are created on the **Tables** page (set the count & capacity — default 8). The *Round* panel on the same page starts and stops rounds: the clock is computed by the server, so it is identical on every phone and survives refreshes. The *Who is seated* panel shows every table's occupants, exportable to Excel.

D Committee — on the day & wrap-up

1 Watch the Dashboard

Registrations, scans per booth, class quotas and the latest activity — it refreshes itself every few seconds.

2 Afternoon: Tables → Start round for each networking round

Pressing *Start next round* closes the old round and opens the new one — there are never two clocks running.

3 Closing: Lucky Draw in stage mode

Two separate draws (Lucky Draw & Doorprize), each with its own minimum-booth-visits requirement. Press *Stage mode* for the big screen; the space bar draws. Winners are stored on the server — a reload loses nothing, and a winner drops out of the other draw automatically.

4 After the event: Reports

Tenant Leads (per booth, notes included), Class Registrations, and Attendee Pins — all Excel.

Lucky Draw — two draw tabs, the minimum requirement, and the stored winners list

Accounts & emergencies: every booth and door account uses the password the committee set (SEED_PASSWORD). Attendee passwords are reset from the Attendees page. The door@natcon.id account also accepts an admin; an attendee account opens nothing but its own app.

Frequently asked questions

QUESTION	ANSWER
Do I need to install anything?	No. Every app runs in the browser; the attendee app can also be added to the home screen as a PWA, and there is an Android APK if the committee hands one out.
Which QR is which?	My QR for booths, the goodiebag and the pin. The class QR (inside the class you registered for) is for the learning-class door only. Table QRs are on the tables.
Signal drops at the venue	Open pages keep working; booth scans queue and send themselves. Data lives on the server, not on the phone.
Switching phones mid-event	Just sign in again with the same account — your stamps, classes and goodiebag do not stay on the old phone.
Class full / hours clash	The app refuses with the reason. Pick another class, or cancel one of yours first.
Double scans	Never double anything. One stamp per booth; one goodiebag/pin per person — the system's answer carries the time of the first handover.
Wrong data (name, chapter, class)	The registration desk fixes it on the spot through the admin panel.

BNI Indonesia National Conference 2026 · Accelerate — the complete app guide, end to end. Screenshots use a sample account that has since been deleted; every other number is the event's own data. Trouble on the day? Go to the registration desk. System by WIT.
